

Magnetic drum separators for QE range scalpers

Maximum extraction and cleaner product

Sandvik magnetic drum separators can be retrofitted, to all Sandvik QE Range mobile scalpers to remove ferrous metal within the feed material.

These are of benefit in applications: where ferrous metal needs to be removed from a contaminated feed material, e.g. construction / demolition and recycling / wood / much / biomass.

To clean a contaminated feed material before further processing and or protect a down stream piece of equipment e.g. a cone crusher in a quarry / aggregate processing application.

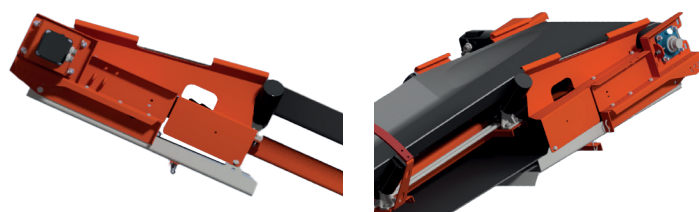

Unwanted ferrous metal particles can be collected and turned into a valuable sellable product for metal recycling.

Features

- Efficient and clean extraction of ferrous materials
- Removal of metals for recycling
- Minimal maintenance
- Easy to install

Each magnetic drum package typically consists of:

- 1 off magnetic head drum
- 1 off discharge chute
- 2 off mounting chains for chute
- All mounting hardware

Kits are available for all current QE range scalper models, as well as their preceding models.

Model	Part Numbers		
	Fines	Midsized	Oversize
QE442 / e / Free Flow	SE002809	SE002906	SF003604**
QE342 / e	SE006702	SE006702	SF003203
QE241	SE005109	SE005109	SF004802

** NOTE: Due to additional mass, QE442/QE441/QE440 oversize conveyor must remain permanently unfolded in operational position when magnetic head drum is installed, reduce working angle for transport.
